

# NON-FERROUS METALS INDUSTRY

NEED TO  
*Reduce AIR  
Emissions?*

**WE CAN HELP!**

**WE CAN REBUILD OR UPGRADE YOUR EXISTING SYSTEM OR BUILD A NEW SYSTEM!**

- Our primary technologies include Dry & Wet Electrostatic Precipitators. The attached brochures give some details on both of these technologies.
- We can upgrade your dry ESP performance with our ELEX discharge electrode, together with modern SMPS technology.
- Since our Membrane Wet ESP can operate as a Condensing Wet Precipitator it is uniquely well suited to remove SO<sub>3</sub> and fine particulate upstream of your acid plant.
